Technical Soil Services

South Central Soil Survey Region

Altus, Oklahoma, MLRA Soil Survey Office

Cotton County, Oklahoma, 2024 Land Judging and Homesite Evaluation Contest

Purpose

Tyler Kempf, soil scientist, and Tyson Morley, MLRA soil survey leader in Altus, Oklahoma, assisted the Cotton County, Oklahoma, NRCS office with the annual Future Farmers of America land judging contest on April 8. The annual contest is held each year on the Cotton County Conservation District farm. Twenty-nine total students judged the site in either the land judging or homesite evaluation contest.

Background

Soil scientists from NRCS selected and prepared four sites within walking distance of one another that exhibited unique soil and landscape characteristics and then filled out the official answer key based on observations from each soil pit. Land judging and homesite evaluation teams judged sites based on characteristics of the soil and observations of landscape conditions. They recommended land treatments by considering factors such as soil characteristics, vegetative conditions, and planned use for the site.

Key Outcomes

Twenty-nine students participated in the one-day contest. The students acquired valuable knowledge that can be used to determine if a site is suitable for building a home or for farming and ranching activities. After the contest, many students realized how important soil is to everyday life for things such as food and construction materials. Many students had questions related to careers in agricultural and natural resources during the contest. The contest was a success and provided students with resources that can be used for conservation planning or a future career.
