

North Dakota and Minnesota Supply Chain Soil Health Partnership Fact Sheet

RCPP Project – 3097

The Supply Chain Soil Health Partnership aims to reach producers who may not yet engage in soil health building conservation, helping them increase the resiliency of their operations through improved soil retention, water infiltration, drought resilience, and 4R stewardship.

The project will monitor and measure environmental outcomes to support the carbon mitigation and water quality goals of partners.

The Soil Health Partnership project will leverage two existing initiatives – the Trusted Advisor Partnership in North Dakota and a soil health program led by the Wilkin County Soil and Water Conservation District in West Central Minnesota.

The goals of the project are to complement supply chain company investments in soil health, nutrient stewardship, and water conservation practices on over 450,000 acres. The project spans all of North Dakota and five Minnesota counties in the southern end of the Red River Valley.

How to Apply

For more information or to submit an application contact Cassie Setter at (701) 356-3183. redriverbasincommission.org

Approved Conservation Practices

328 – Conservation Crop Rotation
329 – No Till
340 – Cover Crop
345 – Reduced Till
590 – Nutrient Management
CPA 116 – Soil Health Management Plan
CEMA 216 – Soil Health Testing
